INVOLVEMENTS

WordPress Workshop for Beginners— *Instructor*

- Presented through a collaborative effort between Collabyte and Khwopa Engineering College

Collabyte— *Graphics Designer*

- Worked as a Graphic Designer at Collabyte, where I was responsible for creating visually engaging designs for posts, banners, and flexes. Enhanced my expertise in a variety of design tools, including Figma, Photoshop, Illustrator, and others.

Hackademia 2.0— *Participant*

- Participated in a hackathon organised by Hackademia and Kings College

Hack The Circle— *Organizing Committee*

- Worked as an OC member in Hack The Circle Hackathon organised by a collaborative effort between Collabyte, Khwopa Engineering College, and Khwopa College of Engineering.

Projects

Chain Reaction

Chain Reaction is a simple yet engaging two-player strategy game created using JavaScript. The game challenges players to strategically place their moves, triggering chain reactions to outmaneuver their opponent.

Tower of Hanoi

Tower of Hanoi is a classic puzzle game recreated using JavaScript, designed to test problem-solving and logical thinking skills. The objective of the game is to move a stack of disks from one rod to another, following specific rules: only one disk can be moved at a time, and no larger disk can be placed on top of a smaller disk. With its intuitive design and interactive gameplay, this implementation offers an engaging way to explore this timeless challenge.

SKILLS

Languages: Python, Javascript, C, C++, PHP, ReactJS, NodeJS

Web development: HTML, CSS

Frameworks and Tools: WordPress, Shopify, Django, FastAPI, Figma

Soft Skills: Problem-solving, Teamwork, Leadership,

CERTIFICATIONS

Introduction to Programming Using Python

- University of Michigan

API Development Workshop

- Collabyte.

API 101 with Postman

- Collabyte.

Python Data Structures

- University of Michigan

Supervised Machine Learning: Regression and Classification

- DeepLearning.AI, Stanford University

Programming with JavaScript

- Meta

3-day Javascript Bootcamp

- Hptech

AI/ML Workshop

- Collabyte

Advanced Learning Algorithms

- DeepLearning.AI, Stanford University

Git and Github Workshop

- Collabyte

AI/ML Bootcamp

- Hackademia

Musicplayer

MusicPlayer is a sophisticated web application developed with Streamlit, designed to enable users to search for and play music videos from YouTube seamlessly. Utilizing Selenium, the application performs background interactions with YouTube to conduct searches and initiate playback. The YouTube interface remains invisible to users, ensuring a smooth and uninterrupted music experience. This approach leverages automated browser interactions to deliver content efficiently while maintaining a clean and user-friendly front-end interface.

WeatherNow

Weather Now is an API-driven weather forecasting web application developed using HTML, CSS, and JavaScript. The application provides real-time weather updates, allowing users to access detailed information such as temperature, humidity, wind speed, and forecasts for specific locations. Its clean interface and responsive design ensure a user-friendly experience across various devices.

Academic Performance Prediction

This project explores the relationship between study hours per week, levels of parental support, and student performance. By utilizing regression analysis, the project aims to identify the strength of these relationships and provide actionable insights for educators. An interactive dashboard is included to visualize the correlations and help educators make informed decisions to improve student outcomes.

Group Creator

This project creates an optimal group of four based on their skills. A group consists of students with different talents. This project tends to solve the issue of group creation during projects and other works.

Kalimati-API

Kalimati-API is a custom API created using Fastapi and BeautifulSoup. This API fetches vegetable prices from the official Kalimati site and returns the prices for the current day in JSON format.

Sentiment Analysis of Social Media Post

Sentiment Analysis of social media post is a NLP project created using Python, sklearn, and NLTK. This project helps to categorize the social media post on the basis of the caption.

EDUCATION

Bagiswori Secondary School, Bhaktapur— SEE, +2

Khwopa Engineering College (In Progress)

- Purbanchal University, Bhaktapur
- Expected Graduation: 2026
